

### Steam System Steam Boiler (oil- / gas fired)

In contrast to a steam generator (with heating coil and piston pump)

Controlled by the water level measured inside of the evaporation system, the centrifugal pump refills the

### Steam System Steam Boiler

## **Steam System Steam Boiler – Advantages**

-

**High fuel efficiency, due to utilisation of exhaust gas energy efficiency up to 97%**

-

**Combines the advantages of a shell boiler with that of a quick steam boiler**

-

**Robust construction (6 - 8 mm thickness pressure vessel)**

-

**High safety standards due to the compact construction and safety devices**

-

**Easy operation: turn on, regularly blow-down, turn off**

-

**High quality construction □ due to the application of industrial standards to all components**

-

**20-year spare part warranty**

- **Master Slave control for the management of multiple boilers (optional)**
