Steam System Steam Boiler (oil- / gas fired)

In **contrast to a steam generator (with heating coil and piston pump)**

Controlled by the water level measured inside of the evaporation system, the centrifugal pump refills the

Steam System Steam Boiler

Steam System Steam Boiler – Advantages

- **High fuel efficiency, due to utilisation of exhaust gas energy efficiency up to 97%**
- **Combines the advantages of a shell boiler with that of a quick steam boiler**
- **Robust construction (6 - 8 mm thickness pressure vessel)**
- **High safety standards due to the compact construction and safety devices**
- **Easy operation: turn on, regularly blow-down, turn off**
- **High quality construction due to the application of industrial standards to all components**
- **20-year spare part warranty**

- **Master Slave control for the management of multiple boilers (optional)**
