

Steam System Steam Boiler (oil- / gas fired)

In contrast to a steam generator (with heating coils and piston pump)

Controlled by the water level measured inside of the evaporation system, the centrifugal pump refills the

Steam System Steam Boiler

Steam System Steam Boiler – Advantages

-

High fuel efficiency, due to utilisation of exhaust gas energy efficiency up to 97%

-

Combines the advantages of a shell boiler with that of a quick steam boiler

-

Robust construction (6 - 8 mm thickness pressure vessel)

-

High safety standards due to the compact construction and safety devices

-

Easy operation: turn on, regularly blow-down, turn off

-

High quality construction due to the application of industrial standards to all components

-

20-year spare part warranty

- **Master Slave control for the management of multiple boilers (optional)**
